Santosh yadav
48-year-old Lifelong Learner | AI / ML
Email santoshkrsbg36@gmail.com

SUMMARY

Lifelong learner and student passionate about AI/ML.
Built a config-driven ML automation system for bucket-based predictions and expected profit reports.
Focus on practical, proof-ready workflows adaptable for business, research, or educational datasets.

PROJECT EXPERIENCE

Config-Driven ML Automation System
- Developed a system that generates bucket-based predictions (LOW/MEDIUM/HIGH) and calculates expected profit using configurable thresholds and PROFIT_MAP.
- Integrated preprocessing (imputer + column transformer) and GridSearchCV for robust model training.
- Generates automatic JSON reports for every run, providing proof of outcome.
- Multi-domain ready: tested on Iris dataset; applicable to business, customer segmentation, and research datasets.

TECHNICAL SKILLS

- Python, Pandas, NumPy
- Scikit-learn: Pipeline, ColumnTransformer, GridSearchCV
- Machine Learning: Classification, Probability-based bucket assignment
- Automation & Reporting: JSON output, config-driven workflow
- Tools: Google Colab, Jupyter Notebook

EDUCATION. Msc (computerScience)

- Lifelong Learner in AI / ML
- Continually exploring practical applications of machine learning and automation
